- Eric Kim is a HUGE help. His way of talking is easier to pay attention to than some of the other TA's and his hard work in creating and printing out notes/worksheets/mini quizzes for us every discussion will not go unmentioned. He is approachable and untiringly helpful both in class and even more so in office hours which is a great feat. I've only seen him a little under the weather once in class but all the rest of the time his patience and attentiveness have no limit. Thank you Eric. I wish I'd made more use of your office hours looking back. But your worksheets save my life because practice is what we need, especially practice in writing rather than just typing like we do for the homeworks.
- Also he is pretty good about replying to emails and taking suggestions.
- Eric does a good job clarifying confusing topics and programming syntax. It's obvious that he really knows the subject. He provides his students with practice problems and posts the solutions which I find helpful. Eric is a very helpful TA!
 - Eric is an INCREDIBLE TA as he is able to explain complex topics in simple terms and make it easy to understand. I would say that a large part of my success in this course lies with the materials he provides to us during section and online, as he is the most engaged of the 3 TAs we have.
 - Eric is very helpful! He prepares a lot for his discussion!
 - Eric is very knowledgeable of the course material and really cares about his students. I was very comfortable going to his office hours knowing how helpful Eric is
 - Eric makes everything clearer and gives a lot of examples which is pretty nice :) He is very nice too, always willing to answer questions!
 - Eric was an awesome guy who put a lot of effort in for his section with all the worksheets and practice he made available with solutions and all. He was also very friendly and approachable and always could help walk you through a problem you were having. 10/10 would choose him for a TA again and again and again.
 - Eric was an extremely kind and effective TA! His slides and exercises during discussions were very helpful, and he was very active in helping out students on the discussion forum! He clearly has a passion and mastery for programming, yet he was still humble and understanding of students' problems! I don't really have anything to recommend...I just hope Eric is a professor at UCLA soon if that's what he wants to do!
 - Eric was excellent in breaking down the instruction of the week into clear, understandable parts with the weekly note pdfs that he provided (for example, defining a term, then giving an example of how to use it and any things to be careful of). In addition, he created worksheets and mini-quizzes for the discussion section to go through for more practice. He was very patient in answering questions and very helpful both in discussion and office hours.
 - He was great overall.
 - Honestly, Eric has been the best TA I've had at UCLA. Let me just tell how much I appreciate how much he put in the time into organizing his lectures, making worksheets, answering questions (both inside and outside of class) but most importantly for not treating me like an idiot. I am very much grateful to have had him as a TA, and he's a perfect model for what an excellent TA should be. I wish they were more

like him.

- I never went to Eric's discussion because another TA's discussion worked better for me but all I could say is whenever I post on the discussion forum he always responds within 10 min! Which is nice because I usually am doing hw at the time and really need the help at the moment. Thank you Eric!
- None. Excellent teaching.
- TA is also knowledgeable of the course. I like how we work on practice problems in discussion because it enforces the things we learn in lecture.
- The TA was very helpful during his teaching hours and took the time to answer questions from the students to make sure they understood what was going on. He also would provide different looks at the code presented in lecture, however, this would usually not serve any purpose when applied to the homework assignments.
- The extra practice problems were extremely helpful!
- The extra problems really helped with further understanding and mastering the material. The quiz right after the first midterm also helped gauge the general area where I needed to improve my skills on. The extra information about various classes, data types, computer architecture, etc. was also very helpful and enlightening.
- good
